Cerro Coso Community College Technology Upgrade/Replacement Plan

INTRODUCTION

Over the past years Cerro Coso College has worked under an informal computer replacement plan that was driven by the various budget managers. Different departments, divisions, and program areas used their individual funds and prioritized the order and timing for computer replacements within their respective areas based upon their unique needs and available funds. Occasionally, there were additional funds that were made available by the appropriate vice president to cover unique situations, such as new faculty or staff hires.   Academic computer labs/classrooms were paid for by building funds, VTEA, instructional equipment money, TTIP, or general funds, depending on availability.

Recently, the college's Technology Resource Team (TRT) was charged with developing a systematic, college-wide plan for replacing computers for faculty, staff and instructional use along with peripheral equipment on a regular cycle.   This will help ensure that all technology on campus is kept up-to-date and that the funding for this plan is clearly established across multiple years. Knowing what is to be replaced and how much it will cost will greatly improve the college's ability to create realistic strategic plans and to continue to fund the college's technology infrastructure and services at their current levels.

To address these issues all computers across the campus will be placed on a regularly scheduled replacement cycle based upon our current information technology standards. There are three groups to consider in replacing our existing computer technology:

> Employee Computers
> Classrooms/Labs Computers
> Network Hardware

GOALS

The goals of the technology replacement plan are to:

1. assure that appropriate computing resources are available in department/division facilities, classrooms, and offices to support the mission of the college;
2. implement the minimum standards for computing equipment on campus, which is reviewed each year by TRT, in order to assure that each faculty and staff member has a computer of sufficient capability to fulfill their job related duties;
3. centralize resource and financial planning and forecast the funding requirements to implement a four-year replacement cycle for computers;
4. provide for the cost effective and timely purchasing and installation of new equipment while decreasing deployment time;
5. provide the framework for an effective asset management cycle of procurement, purchase, installation, support, upgrade, disposal;

6. support the use of technology by faculty, administration, and staff in using computers to promote student success;
7. promote standardization of technology where appropriate.

A complete list of the college's technology assets to be replaced can be found on the Replacement Worksheet. This worksheet includes a list of all the assets, their inventory numbers, their purchase dates, their warranty expiration dates, and their replacement dates. The first Replacement Worksheet is to be completed in summer 2007.

BEST PRACTICES

When it comes to warranties, TRT has determined that the best practice for our institution is to purchase industry-standard warranties and then to replace the hardware when the warranty runs out rather than trying to purchase extended warranties or to go without. The college cannot rely on out-of-date, unsupported hardware. What we do here at the college and the kind of data we keep are too important. Older equipment is not only harder to fix but also a far greater security threat.

Also, TRT considers it a best practice that any changes by a department or office in regards to technology resources be documented in a program review, department annual unit plan, or similar work plan and must be justified by appropriate data. Increases or enhancements in technology allocation must be driven by in particular appropriate planning documents, not by unsubstantiated anecdotes or verbal requests.

TIMETABLE

The timetable for replacement is governed by two primary considerations: 1) the total number of computer and network assets at the college and 2) accepted industry standards for replacement.

1. Currently, the college owns about 700 computers with associated peripherals. It also supports a network infrastructure with domain controllers, file servers, and backup systems. These assets are spread out over five physical sites.

   Assets to be tracked on the worksheet are the following:

   Network Infrastructure

   ATM switches
   Ethernet switches
   Hubs
   Routers
   Test equipment

Servers

Application, development
Application, production
Application, test and quality assurance
Backup and restore devices
Database, development
Database, production
Database, test and quality assurance
DHCP DNS services
Domain controller
File and Print
Network backup
Network management
Network monitoring
Remote access
SAM services
Security
SLP directory service agent
Specialty Terminal server
Web

Workstations

Desktop Windows
Desktop Macintosh
Laptop Windows
Laptop Macintosh
PDA
Unix

Peripherals

Disk units
External CD Burners
Laser Printers
Desktop Printers
Scanners
Tape Units
UPS
Projectors
DVD Players
Audio Systems
VHS Players

Interactive Television

> Cameras
> Codecs
> Computers
> TVs
> Projectors
> VHS Equipment
> DVD Equipment
> Speaker Systems
> Microphone Systems
> Tandberg Systems

2. Industry standards for replacement vary with the different kinds of hardware. Computers generally require a three-to-four year replacement cycle, servers five years, UPS systems two years, and so on.

COMPUTER REPLACEMENT

At an early stage of this plan's development, the committee considered a cascade replacement plan. In this type of plan, all computers at the college are put in groups of higher or lower priority and those with the highest priority are kept constantly updated—no more than one or two years old. With every refresh, the older computers are relocated (or "cascaded") to other labs and/or employees around the college requiring less current technology.

However, the drawbacks to such a plan outweigh the benefits. Time and resources must be spent moving computers—clearing them, re-imaging, physically moving the asset, transitioning profiles, etc. The situation is further exacerbated by the college's multiple sites which would all have to play a role in a four-year replacement plan. Secondly, when we looked closely at the system requirements for the different labs and offices, we discovered that with few exceptions Cerro Coso is not an institution with such widely varying needs in technology that a cascade plan makes sense. Most staff members carry out their job by means of basic, non-specialized programs. A computer lasting four years adequately serves this need.

For these reasons, the committee decided to go with a simple replacement plan. Moreover, since the computers devoted to instruction and those used by faculty and staff are split almost even in terms of numbers, the replacement plan has a very basic structure:

> Year 1: first ½ of the computer labs
> Year 2: first ½ of the employee computers
> Year 3: second ½ of the computer labs
> Year 4: second ½ of the employee computers

Exactly which computers are to be replaced in which years is detailed on the Replacement Worksheet. Year 1 is the 2007-08 fiscal year.

The effectiveness of the timetable for computer replacement is to be reviewed by TRT periodically. Feedback will be sought and adjustments made to ensure that appropriate computer resources are available in the right areas of the college.

Employee Computers

Employee computers covers all faculty, staff, and administrative computers.   It includes workstations for faculty, classified staff, and administrators as well as general use computers shared in an area or used by substitute or part-time workers. Some areas, such as Special Services and Student Services, may leverage other funds for purchase though generally a match is required in any event. Areas which are funded on a cost recovery basis may not be covered under this replacement plan.

This process calls for the replacement of all computers every four years. For a very few clearly defined users, computers may be kept current at a faster rate. These users are required to run special software or perform unique tasks *as part of their assigned job duties* and therefore require computer with more memory, a faster processor, or larger hard disk space. These users will be clearly identified on the worksheet.

This plan will be executed as follows. Each year, the IT staff will

- Use the worksheet to identify which employee computers are to be replaced
- Remove and store the existing computers and monitors from the identified areas
- Replace all computers with a new computer meeting minimum standards

To accomplish this goal, a timetable has been established on the Replacement Worksheet. Individual machines to be replaced are detailed on this worksheet. The process will start with Year 2 computers being ordered around July 2008, so the installation can occur during summer, when there is least disruption. There will be approximately 175 workstations installed every other year for the employee replacement process.

Classroom/Lab Computers

The classroom/lab computer replacement process covers student and instructor workstations in computer labs, open labs, technology-enhanced classrooms, laboratories, and the like. The replacement covers monitors, workstations, notebooks, and Macintosh computers. There is currently no programmatic need for a high end lab. If such a lab is needed in the future, it will need to be identified in program reviews and annual unit plans.

This process calls for the replacement of all computers every four years. That means that half the lab classrooms will be refreshed every two years. It is strongly recommended that departments needing newer computers schedule accordingly.

This plan will be executed as follows. Each year, the IT staff will

☐   Use the worksheet to identify which laboratory and open lab computers are to be replaced
☐   Remove and store the existing computers and monitors from the identified areas
☐   Replace all computers with a new computer meeting minimum standards

To accomplish this goal, a timetable has been established in the Replacement Worksheet. Individual machines that will be replaced are detailed on this worksheet. The process will start with Year 1 computers being ordered around July 2007, so the installation can occur during summer, when there is least disruption. There will be approximately 175 workstations installed every other year in the instructional areas.

Computer Replacement Installation Process

Prior to the start of the installations, the IT staff will communicate with the various faculty and staff to announce the timeframe for replacements. IT staff will work with employees and offices to set up specific installation dates and times that will minimize disruption.

☐   For classrooms/labs, installations will be scheduled to ensure minimal impact on instruction and that the technology is implemented as quickly as is feasible.

☐   Information technology staff will need approximately 1 hour per workstation for a standard setup.
☐   Software will be installed on all new workstations. If the new computer permits an upgrade in software, new standard software will be installed. Non-standard software will not be replaced without the original installation media and proof of a license.
☐   The IT staff will remove the old workstations for surplus.

NETWORK HARDWARE REPLACEMENT

Network hardware is a responsibility of the Information Technology department. Because of security concerns, the inventory, specific timetable, and process of the replacement of network hardware will be maintained by the Director of IT working collaboratively with the IT staff.

Just as with the computer replacement plan, network hardware replacement plan will be reviewed periodically for effectiveness by TRT.
