BIOLC112H: General Biology II Honors

General Information

Author: • Claudia Sellers

Ooi, Guck

Burch, Andrew

BIOLC112H Course Code (CB01):

Course Title (CB02): General Biology II Honors

Department: Science **Proposal Start:** Spring 2022

TOP Code (CB03): (0401.00) Biology, General

SAM Code (CB09): Non-occupational

Distance Education Approved: No

Course Control Number (CB00): CCC000221772 **Curriculum Committee Approval Date:** 02/07/2014 **Board of Trustees Approval Date:** 03/06/2014 **External Review Approval Date:** 06/19/2014

Course Description: This course is for students majoring in biological sciences and related subjects. It covers organism

> diversity and examines the basic principles governing evolution of organisms and their interactions with the environment. The course sequence includes evolutionary biology, phylogenetics, anatomy and physiology of plants, ecology, and the major taxa of protists, fungi, plants, and animals. The honors class provides more content and requires greater intensity and depth of study than the non-honors class. BIOL C111 is not a prerequisite for this course.

Submission Type: Mandatory Revision

Cyclical review. Revisions to Course Description, update textbook, and streamlined SLO's. ENGL

C101 is made as prerequisite. Added rationale to Methods of Instructions. Course was last

assessed in Spring 2020, and has no impact on this revision.

Pre-requisites, Co-requisites, Anti-requisites and Advisories

Prerequisite

MATHC055 - Intermediate Algebra (in-development)

The quantitative aspects of Biology such as population analysis, phylogenetic analysis, and Hardy-Weinberg equations, require college-level algebra to understand the concepts and significance of these measurements. Students will be required to interpret and comprehend the underlying equations that form the basis of these measurements. MATH C055 will provide the student with the requisite skills to meet these expectations.

MATH C055 requisite is required for transfer by CSU, UC and other four-year institutions.

AND

Prerequisite

ENGLC101 - Freshman Composition

Students in BIOL C112H must be able to read and comprehend a college-level Biology textbook which are usually written at a Gunning Fog Index of 13 to 14. They are expected to identify central points, both explicit and implied, outline and summarize complex and technical scientific readings, and interpret difficult and figurative language in academic discourse and scientific terminology. Students must also be able to write summaries of assigned readings from the course textbook, answer homework questions using paragraph-length responses, and answer essay questions in clear and error-free prose based on readings from various scientific texts. ENGL C101 provides the student with the requisite skills to meet these expectations. Relevant outcomes from ENGL C101 are:

- Read, analyze, and evaluate a variety of university-level texts for content, context, and rhetorical merit with consideration of tone, audience, and purpose.
- Develop varied and flexible strategies for generating, drafting, and revising essays.
- · Evaluate the style of one's own writing and the writing of others and self-correct for greater clarity and directness.
- Write timed essays in class exhibiting acceptable college-level control of mechanics, organization, development, and coherence.
- Integrate the ideas of others through paraphrasing, summarizing, and quoting without plagiarism.
- Proofread and edit essays for presentation so they exhibit no disruptive errors in English grammar, usage, or punctuation.

This is also an Honors Program requirement. ENGL C101 prepares honors students for essential communicative tasks by teaching them how to research papers, analyze college-level readings, and to compose and write a research paper of no less than 2500 words using appropriate formatting and documentation (e.g. MLA or APA).

Limitations on Enrollment		
Limitations on Enrollment	Description	
Enrollment in this honors course is limited to students enrolled in the associated course. Students will be required to read and comprehend challenging materials and analyze in depth a chosen topic appropriate for intensified study, and must be able to maintain a minimum standard of coursework at the honors level.	No Value	

Specifications

Methods of Instruction

Methods of Instruction

Rationale Classroom lecture using board-work and Powerpoint to explain material from the assigned

textbook

Lecture

Example: Origin of Life - The Miller-Urey experiment demonstrating that organic molecules can

be synthesized spontaneously under conditions simulating primordial earth.

Methods of Instruction

Laboratory

Rationale

Group work to further explore important ideas. Individual reading of material in

preparation to review and conduct laboratory experiments.

Example: Students are asked to use genetic distances to construct a phylogenetic tree during lab

class.

Methods of Instruction

Demonstration

Rationale

Proper laboratory techniques are demonstrated to ensure safe and correct lab procedures are

followed.

Example 1: Students are asked to complete the exercises in the handout "Biology for Life - Lab

Safety Worksheet"

Example 2: A model scientific talk on a selected scientific article is presented to honors students to

illustrate the key points of a conference presentation.

Assignments

Homework Assignments: Students are asked to assimilate the assigned reading material. Example: Read chapter 2. Student should read chapter two and assimilate material. Method of material assimilation is not prescribed. It is suggested that students outline chapters, answer study questions in the text, utilize on-line materials provided by the text publisher, and form study

Laboratory Reports: Laboratory experiments are designed to provide hands on learning for concepts discussed in lecture. Example: Write a Lab Report, including an Abstract, Introduction, Methods, Results and Conclusion, about your bead lab model and the real world applications it illustrates

Methods of Evaluation

Rationale

Homework

Homework Assignments: Students are asked to assimilate the assigned reading material. Example: Read chapter 2. Students should read chapter two and assimilate material. Method of material assimilation is not prescribed. It is suggested that students outline chapters, answer study questions in the text, utilize on-line materials provided by the text publisher, and form study aroups.

Tests

Quizzes: Quizzes covering topics from lecture material and reading assignments are given.

Example: A

quiz covering the Hardy-Weinberg Equations is given to assess students' understanding of the application this key concept.

Tests

Exams: Exams covering the material covered in lecture and reading assignments are given to assess student learning. Example: Exam one covers the scientific method, chemistry of life, biological

molecules, cell biology, energy flow in biological systems, cellular respiration, and photosynthesis.

The exam can be but is not limited to multiple choice, true/false, short answer and essay.

Other Laboratory Reports: Laboratory experiments are designed to provide hands on learning for

concepts discussed in lecture. Example: Write a Lab Report, including an Abstract, Introduction, Methods, Results and Conclusion, about your bead lab model and the real world applications it

illustrates.

Research Paper Honors students are required to either write a 2,500-word research paper or give an oral

presentation of their research. Research paper must contain primary source(s) and multiple academic secondary sources, using appropriate formatting (e.g. APA) and documentation. Oral presentation of the research paper should be no less than 15 minutes. The honors project provides students with an opportunity for intensified inquiry beyond the scope of the non-honors

class. Both are scored by a rubric.

A 2,500-word Research Paper - Example: Choose an endangered species, read the federal recovery plan, evaluate its likelihood of success, and how you think the plan should be changed.

Oral Presentation - Example: Select a current scientific article, and give an oral presentation of the research findings to the class.

Learning Outcomes and Objectives
Course Objectives
Apply the processes of scientific inquiry including experimental design.
Carry out an experiment to test a specific hypothesis using appropriate controls.
Explain the essential elements of life, major hypotheses for life's history, mechanisms for the diversification of life, and macroevolution.
Apply the tools of evolutionary biology to the analysis and evaluation of historical relationships among organisms.
Describe mechanisms of evolutionary change including micro-evolutionary forces that determine patterns of genetic diversity within species.
Provide evidence for evolution.
Evaluate the ecological relationships of organisms at the population, community, and ecosystem level.
Describe flow of energy within an ecosystem and the role of nutrient cycling in maintaining ecosystem integrity.
Explain fundamental prokaryotic replication, metabolism, and cellular structure in relationship to evolution of diversity.
Compare and contrast differences in animal development and life cycles.
Compare and contrast differences in plant development and life cycles.
Describe how plants and animals maintain homeostasis: water and ion balance, gas exchange, energy and nutrient acquisition, temperature regulation.
For major taxa of protists, fungi, plants and animals: i) Identify major groups and arrange them within currently recognized taxa, ii) Compare and evaluate different phylogenies in terms of relationships amongst taxa, iii) Describe structural organization/morphology, iv) Identify and describe structures and relate them to their functions, v) Classify individual representative specimens to phylum.
CSLOs

Formulate research questions and use the scientific method to design experiments, collect and analyze data, derive conclusions, and write Expected SLO Performance: 70.0 scientific reports.

Discuss evolutionary biology principles, including how the process of evolution has resulted in both similarities and differences between all living Expected SLO Performance: 70.0 things.

Expected SLO Performance: 70.0 Evaluate the ecological relationships of organisms at the population, community, and ecosystem level.

Expected SLO Performance: 70.0 Describe the flow of energy within an ecosystem and the role of nutrient cycling in maintaining ecosystem integrity.

Expected SLO Performance: 70.0 Identify the major groups of organisms and classify them within a phylogenetic framework.

Describe functions of organ systems in plants and animals, and how they maintain homeostasis. Expected SLO Performance: 70.0

Analyze a topic appropriate for intensified study beyond the scope of the non-honors class, using university-level readings and vocabulary and demonstrating intellectual autonomy. This project will result in a research paper or oral presentation based on research - both scored by a rubric -Expected SLO Performance: 70.0 or a graded exam.

Outline

Course Outline

Topical Outline:

- A. Scientific Method
- B. Evolutionary Biology
 - 1. Decent with Modification
 - a. The Darwinian View
 - b. Evidence for Evolution
 - 2. Evolution in Populations
 - a. Hardy-Weinberg Equations
 - b. Origin of Genetic Variation
 - 3. Origin of Species
 - 4. History of Life on Earth
 - a. Conditions of Early Earth
 - b. Key Events in Evolution of Life
 - c. Extinction in Evolution of Life
 - d. Major Changes in Body Form
- C. Evolutionary History of Biodiversity
 - 1. Phylogenetic Analysis for Showing Evolutionary Relationship
 - 2. Prokaryotes: Bacteria and Archea
 - a. Phylogeny of Prokaryotes
 - b. Structural and Functional Diversity of Prokaryotes
 - c. Ecological Importance of Prokaryotes
 - 3. Protists
 - a. Phylogeny of Protists
 - b. Structural and Functional Diversity of Protists
 - c. Ecological Importance of Protists
 - 4. Plants
 - a. Phylogeny of Plants
 - b. Structural and Functional Diversity of Plants
 - 5. Fungi
 - a. Phylogeny of Fungi
 - b. Structural and Functional Diversity of Fungi
 - c. Ecological Importance of Fungi
 - 6. Animals

- a. Animal Phylogeny
- b. Structural and Functional Diversity of Invertebrates
- c. Structural and Functional Diversity of Vertebrates
- D. Plant Form and Function
 - 1. Growth and Development
 - 2. Resource Acquisition and Transport
 - a. Modes of Transport
 - b. Movement of Water and Minerals
 - c. Movement of Sugars
 - 3. Soil and Plant Nutrition
 - a. Soil
 - b. Nutrition
 - 4. Angiosperm Reproduction
 - 5. Plant Responses to the Environment

E. Ecology

- 1. Scope of Ecology
- 2. Distribution of Organisms
- 3. Biomes
- 4. Population Ecology
 - a. Demography and Life History
 - b. Population Growth and Regulation
- 5. Community Ecology
 - a. Community Interactions
 - b. Disturbance
 - c. Biogeography
- 6. Ecosystems
 - a. Energy and Chemical Cycling
 - b. Human Activity and its Environmental Impact
- 7. Conservation and Restoration Biology
 - a. Threats to Biodiversity
 - b. Conservation of Populations and Landscapes
 - c. Sustainability
- 8. Behavioral Ecology
 - a. Sensory Inputs
 - b. Learning
 - c. Influence of Environment and Genetics
 - d. Selection on Behavior
- F. Honors section
 - 1. Research articles
 - 2. Discussion of sources
 - 3. Critiquing and evaluating articles
 - 4. Oral presentation

Lab Outline

- 1. Scientific Method
 - a. Questions and Hypotheses
 - b. Designing an Experiment
 - c. Presenting and Analyzing Results
 - d. Interpreting and Communicating results
- 2. Population Genetics
 - a. Hardy -Weinberg Principle
- 3. Bacteriology
 - a. Characteristics of Bacteria
 - b. Ecological Succession
 - c. Bacteria in the environment
 - d. Controlling Bacterial Growth
- 4. Protists
 - a. Excavata
 - b. "SAR": Stramenopile; Alveolates; and Rhizarians
 - c. Archaeplastida
- 5. Plant Diversity 1

- a. Bryophytes Non-vascular Plants
- b. Seedless Vascular Plants
- 6. Plant Diversity II
 - a. Gymnosperms
 - b. Angiosperms
- 7. Bioinformatics
 - a. Phylogenetic Relationships among RuBisCo Large Subunit Genes
 - b. Analyzing Phylogenetic Trees and Reporting Results
- 8. Funai
 - a. Zygomycota
 - b. Ascomycotoa
 - c. Basidiomycota
 - d. Animal Diversity I
 - e. Porifera
 - f. Cnidaria
 - g. Platyhelminthes
 - h. Mollusca
 - i. Annelida
- 9. Animal Diversity II
 - a. Nematoda
 - b. Arthropoda
 - c. Echinoderma
 - d. Chordata
- 10. Plant Anatomy
 - a. Morphology
 - b. Primary Growth and Development
 - c. Cell Structure of Primary Tissues
 - d. Structure of Tissues Produced by Secondary Growth
- 11. Plant Growth
 - a. Seedling Germination
 - b. Plant Growth Regulators
 - c. Auxin
 - d. Gibberellins
- 12. Honors section
 - 1. Research articles
 - 2. Discussion of sources
 - 3. Critiquing and evaluating articles
 - 4. Summary research articles/oral presentation

Delivery Methods

Delivery Method: Please list all that apply -Face to face -Online (purely online no face-to-face contact) -Online with some required face-to-face meetings ("Hybrid") -Online course with on ground testing -iTV - Interactive video = Face to face course with significant required activities in a distance modality -Other

· Face to face

Rigor Statement: Assignments and evaluations should be of the same rigor as those used in the on-ground course. If they are not the same as those noted in the COR on the Methods of Evaluation and out-of-class assignments pages, indicate what the differences are and why they are being used. For instance, if labs, field trips, or site visits are required in the face to face section of this course, how will these requirements be met with the same rigor in the Distance Education section? Describe the ways in which instructor-student contact and student-student contact will be facilitated in the distance ed environments.

No Value

Good practice requires both asynchronous and synchronous contact for effective contact. List the methods expected of all instructors teaching the course. -Learning Management System -Discussion Forums -Message -Other Contact -Chat/Instant Messaging -E-mail -Face-to-face meeting(s) -Newsgroup/Discussion Board -Proctored Exam -Telephone -iTV - Interactive Video -Other

- Discussion Forums
- E-mail
- Face-to-face meeting(s)
- Telephone

Software and Equipment: What additional software or hardware, if any, is required for this course purely because of its delivery mode? How is technical support to be provided?

No Value

Accessibility: Section 508 of the Rehabilitation Act requires access to the Federal government's electronic and information technology. The law covers all types of electronic and information technology in the Federal sector and is not limited to assistive technologies used by people with disabilities. It applies to all Federal agencies when they develop, procure, maintain, or use such technology. Federal agencies must ensure that this technology is accessible to employees and the public to the extent it does not pose an "undue burden". I am using -iTV—Interactive Video only -Learning management system -Publisher course with learning management system interface.

· Learning management system

Class Size: Good practice is that section size should be no greater in distance ed modes than in regular face-to-face versions of the course. Will the recommended section size be lower than in on-ground sections? If so, explain why.

Nο

Emergency Distance Education Options The course will operate in remote delivery mode when all or part of the college service area is under an officially declared city, county, state, or federal state of emergency, including (check all that apply) - Online including all labs/activity hours - Hybrid with online lecture and onsite lab/activity hours - Correspondence education in high school and prison facilities - None. This course will be cancelled or paused if it cannot be held fully onsite.

- Online including all labs/activity hours
- Hybrid with online lecture and onsite lab/activity hours
