

ITC255 : Introduction to Cybersecurity: Ethical Hacking

General Information

Author:	<ul style="list-style-type: none">• Valerie Karnes• Hightower, Matthew• Harper, Christopher• Bennett, Keith
Course Code (CB01) :	ITC255
Course Title (CB02) :	Introduction to Cybersecurity: Ethical Hacking
Department:	Business Information Technolog
Proposal Start:	Spring 2019
TOP Code (CB03) :	(0708.10) Computer Networking
SAM Code (CB09) :	Clearly Occupational
Distance Education Approved:	Yes
Course Control Number (CB00) :	CCC000574155
Curriculum Committee Approval Date:	03/16/2018
Board of Trustees Approval Date:	06/14/2018
External Review Approval Date:	Pending
Course Description:	<p>This course introduces the network security specialist to the various methodologies for attacking a network. Students are introduced to the concepts, principles, and techniques, supplemented by hands-on exercises, for attacking and disabling a network within the context of properly securing a network. The course emphasizes network attack methodologies with the emphasis on student use of network attack techniques and tools and appropriate defenses and countermeasures. Students receive course content information through a variety of methods: lecture and demonstration of hacking tools are used in addition to a virtual environment. Students experience a hands-on practical approach to penetration testing measures and ethical hacking. Note: This course was formerly CSCI C190.</p>
Submission Type:	<p>Improvement to Program of Study</p> <p>Per program review, changing CSCI to IT for program clarification and SLO data assessment. Also renumbered class to clarify sequence order.</p>
Author:	No value

Faculty Minimum Qualifications

Master Discipline Preferred:	<ul style="list-style-type: none">• Computer Information Systems (Computer network installation, microcomputer technology, computer applications)• Computer Science• Engineering Technology
Alternate Master Discipline Preferred:	<ul style="list-style-type: none">• Computer Information Systems (Computer network installation, microcomputer technology, computer applications)• Computer Science
Bachelors or Associates Discipline Preferred:	<ul style="list-style-type: none">• Computer Information Systems (Computer network installation, microcomputer technology, computer applications)

Additional Bachelors or Associates Discipline Preferred:

- Computer Information Systems (Computer network installation, microcomputer technology, computer applications)
- Computer Science

Pre-requisites, Co-requisites, Anti-requisites and Advisories

Prerequisite

CSCIC101 - Introduction to Computer Information Systems

Students need to be able to install their own software and understand what memory is, how to zip and unzip files, how to save and find their files, and how to utilize a computer's operating system (Windows, Apple and Linux) and application software. This material is covered in the CSCI C101/IT C101 course.

AND

Advisory

ITC142 - Information & Communication Technology Essentials

Students need to know the essential skills for individual computer repair to assist them as they complete the skills for an Information Technology Technician. These skills include computer hardware identification and basics of building a computer to include installation of components power supplies, motherboards, processor, memory, and expansion card). In addition, students need to have experience and knowledge of installing and configuring operating systems, application software and updates. This material is covered in the CSCI C142/IT C142 course.

AND

Advisory

CSCIC146 - Introduction to Information Systems Security

Students need an understanding of network security and risk management including processes, communications and the application of policies and procedures for securing computers and networks. This material is covered in CSCI C146/IT C146.

AND

Advisory

ITC143 - Computer Network Fundamentals

Students need a basic understanding of networking terminology, network structure to transfer that knowledge to network security. This material is covered in the CSCI C143/IT C143 course.

Methods of Instruction	Demonstration			
Rationale	No value			
Methods of Instruction	Discussion			
Rationale	Discussions			
Methods of Instruction	Other			
Rationale	Simulation Scenarios. Lab Based Scenarios.			
Assignments				
<p>A. Chapter reading (Example: Reading the assigned chapters from the textbook based on the topics for the week).</p> <p>B. Research and analysis projects (Example: Analyze a real world scenario and develop a plan for conducting a penetration test on the target systems).</p> <p>C. Weekly step-by-step security tool assignments (Example: Follow instructions to evaluate computer system vulnerabilities using a vulnerability scanner and document findings).</p> <p>D. Simulation and lab assignments (Example: Use industry standard utilities to identify and exploit weaknesses in target systems. Demonstrate an ability to then mitigate the discovered risks).</p>				
Methods of Evaluation	Rationale			
Final Exam	Comprehensive Exam: A comprehensive exam will evaluate the student's preparedness for the Certified Ethical Hacker (CEH) certification exam.			
Participation	In class discussions. These discussions will introduce students to concepts associated with ethical hacking and provide elaboration on topics from the text. For example, discussing what actions that must be taken to ensure that the security professional is not held liable before beginning a penetration test.			
Tests	Objective Exams. These exams will evaluate the student's comprehension of text material and prepare them for the Certified Ethical Hacker (CEH) certification exam.			
Project	Hands-on projects. These projects will require the use of industry standard utilities for a wide array of activities such as fingerprinting a remote system and then exploiting identified weaknesses in the system to gain access.

Learning Outcomes and Objectives

Course Objectives

Describe and categorize the tools and methods a "hacker" uses to break into a computer or network.

Defend a computer and a Local Area Network (LAN) against a variety of different types of security attacks using a number of hands-on techniques.

Practice and use safe techniques on the World Wide Web.

CSLOs

Describe and categorize the tools and methods a "hacker" uses to break into a computer or network.

Expected SLO Performance: 70.0

Defend a computer and a Local Area Network (LAN) against a variety of different types of security attacks using a number of hands-on techniques.

Expected SLO Performance: 70.0

Evaluate and demonstrate safe techniques on the World Wide Web.

Expected SLO Performance: 70.0

Outline

Course Outline

- 1) Ethical Hacking Overview
 - a) Threats and Vulnerabilities
 - b) Network and Computer Attacks
 - c) Approaches to Ethical Hacking
- 2) Transmission Control Protocol/Internet Protocol (TCP/IP) Concepts Review
- 3) Footprinting
 - a) Footprinting Overview
 - b) Footprinting Tools
 - c) Public Footprinting Utilities
- 4) Social Engineering
- 5) Port Scanning
 - a) Scanning Overview
 - b) Scanning Tools
- 6) Enumeration
 - a) Enumeration Overview

- b) Enumeration Tools and Techniques
- 7) Programming for Security Professionals
- 8) Embedded Operating Systems
- 9) Linux Operating System Vulnerabilities
- 10) System Hacking
 - a) Password Attacks and Countermeasures
 - b) Privilege Escalation
 - c) Keylogging
 - d) Spyware
 - e) Rootkits
- 11) Hacking Web Servers
- 12) Hacking Wireless Networks
- 13) Avoiding Detection
 - a) Audit and Event Log
 - b) Steganography
- 14) Cryptography
- 15) Protecting Networks with Security Devices

Lab Outline

1. Infiltrating wireless networks
2. Discovering targets on a network
3. Exploiting common operating systems
4. Exposing common results of poor security practices using a browser.

Delivery Methods and Distance Education

Delivery Method: Please list all that apply -Face to face -Online (purely online no face-to-face contact) -Online with some required face-to-face meetings ("Hybrid") -Online course with on ground testing -iTV – Interactive video = Face to face course with significant required activities in a distance modality -Other

Face 2 Face
 Online
 Hybrid

Rigor Statement: Assignments and evaluations should be of the same rigor as those used in the on-ground course. If they are not the same as those noted in the COR on the Methods of Evaluation and out-of-class assignments pages, indicate what the differences are and why they are being used. For instance, if labs, field trips, or site visits are required in the face to face section of this course, how will these requirements be met with the same rigor in the Distance Education section?

All assignments in distance education courses (online, hybrid and iTV) of IT C255 are of the same rigor as those in the on-ground course, except that students in purely online sections will submit all of their assignments virtually. The use of industry-standard software and a simulation manual instructs students to complete a series of tasks and provides detailed documentation of their results to the instructor. The instructor reviews the student's results and provides feedback to the students on skill development and selection of the correct methods. The instructor can view students' step-by-step actions to provide feedback and guide their learning. The instructor does provide detailed feedback to students to guide their learning. Instructor evaluation of student work in distance education courses is the same as in the on-ground course, except that evaluation of student work in online is presented virtually. Instead of on-site lectures, hybrid and online courses use a variety of methods including, but not limited to videos, interactive simulations, and written lecture notes.

Effective Student-Instructor Contact: Good practice requires both asynchronous and synchronous contact for effective contact. List the methods expected of all instructors teaching the course. -Learning Management System -Discussion Forums -Moodle Message -Other Contact -Chat/Instant Messaging -E-mail -Face-to-face meeting(s) -Newsgroup/Discussion Board -Proctored Exam -Telephone -iTV -Interactive Video -Other (specify)

email
face2face
discussion
itv

Software and Equipment: What additional software or hardware, if any, is required for this course purely because of its delivery mode? How is technical support to be provided?

A 3 node server cluster running VMWare ESXi or Hyper-V which can be used to host virtual environments. Network equipment to establish a private network to provide connectivity to the class servers. Modern workstations with wired and wireless network card

Accessibility: Section 508 of the Rehabilitation Act requires access to the Federal government's electronic and information technology. The law covers all types of electronic and information technology in the Federal sector and is not limited to assistive technologies used by people with disabilities. It applies to all Federal agencies when they develop, procure, maintain, or use such technology. Federal agencies must ensure that this technology is accessible to employees and the public to the extent it does not pose an "undue burden". I am using -iTV—Interactive Video only -Learning management system -Publisher course with learning management system interface.

Class Size: Good practice is that section size should be no greater in distance ed modes than in regular face-to-face versions of the course. Will the recommended section size be lower than in on-ground sections? If so, explain why.
